Younes Alhallack

Flutter Mobile Developer | Cross-Platform Apps · Clean Architecture · Firebase

Damascus, Syria | +963 937 877 116 | younesalhallack@gmail.com | github.com/younesalhallack |

PROFILE

Flutter developer with 2 years of hands-on, self-directed experience building cross-platform mobile applications — covering UI, state management (GetX, Provider, Riverpod), and local/cloud data persistence (ISAR, SQLite, Firebase). Complemented by direct technical oversight of a production-grade Flutter payment application as part of an 8-year background in the payments and fintech industry, giving a rare combination of coding ability and real-world understanding of how mobile apps integrate with backend payment systems.

TECHNICAL SKILLS

Mobile (Flutter/Dart)	Flutter, Dart, GetX, Provider, Riverpod state management, Firebase, SQLite, ISAR
Architecture & Practices	Clean Architecture, OOP, RESTful API integration, Git/GitHub version control
Backend & APIs	Node.js & Express, RESTful APIs, MySQL, MongoDB
Tools & Practices	Git/GitHub, app testing & QA standards, permission & security review

FEATURED PROJECTS

Rafiq — AI-Powered Goal & Task Management App | *github.com/younesalhallack/Rafiq*

- Built a Flutter app where users set a goal and an AI engine (Grok API) generates a personalized action plan to reach it, with a percentage-based progress-tracking system for goals and tasks.
- Structured the codebase around Clean Architecture principles (clear separation of data, domain, and presentation layers) for testability and maintainability.
- Stack: Flutter, Riverpod, ISAR (local persistence), MySQL, Grok AI API integration.

Bill App — Personal Finance & Expense Manager | *github.com/younesalhallack/bills_app*

- Built a multi-currency income and expense tracker with custom and default categories; each transaction updates the overall balance in real time.
- Designed a reporting dashboard showing spending share by category, income share by source, and month-over-month income vs. expense comparisons.
- Stack: Flutter, Riverpod, ISAR (local persistence).

Additional full-stack project: Dukan — small-retail inventory, invoicing, and sales/profit reporting system (React, Node.js, MySQL). github.com/younesalhallack/dukan

All projects are self-directed and open-source; not yet published to app stores.

PROFESSIONAL EXPERIENCE

E-Payment Manager — Mobile App Technical Supervisor **Mar 2023 – 2025**

Pick&Click | Damascus, Syria

- Supervised end-to-end development of Q Pay, a Flutter-based mobile payment-request application, directing an external development team from architecture through go-live readiness.
- Set testing standards, led vulnerability identification, and enforced permission controls for the mobile application before it reached the licensing stage.
- Connected the mobile app to backend payment gateway and switch infrastructure via API, providing first-hand experience of how Flutter apps integrate with real payment systems.

Head of System Security & Infrastructure **May 2021 – Feb 2023**

Syrian Electronic Payment Co. (SEP) | Damascus, Syria

- Led a 3-person infrastructure/security team supporting a national payment platform connecting 18 banks and 30 billers, with ~99%+ uptime.

Testing & Operation Engineer **Jun 2020 – Jun 2021**

Syrian Electronic Payment Co. (SEP) | Damascus, Syria

- Ran technical go-live testing and onboarding for bank and biller participants on the national payment system (SOAP web services, Linux, Oracle 12c).

EDUCATION

BA in Electronic Engineering Aleppo University | 2018

LANGUAGES

Arabic (Native) | English (Professional Working Proficiency)
